A Laterally-actuated spray device

5 A fluid spray device comprising a reservoir (10)
containing fluid; a pump or a valve mounted on the
reservoir (10) by means of a fixing ring (30) for
selectively dispensing the fluid; and a dispenser head
10 (40) including a dispenser orifice (45), the device
further comprising an actuator device (50) that is
displaceable between a rest position and a dispensing
position, the actuator device (50) being displaced in a
direction that is different from the direction in which
the fluid is sprayed through the dispenser orifice (45),
15 said actuator device (50) being formed on the dispenser
head (40), and co-operating with the fixing ring (30) in
order to actuate the pump or the valve, said actuator
device (50) including at least one actuator element (51)
pivotally mounted on said dispenser head (40), the fluid
20 spray device being characterized in that each actuator
element (51) includes an actuator portion (52) co-
operating with said fixing ring (30), and a presser
element (54) on which the user exerts an actuation force,
said presser element (54) being pivotally mounted on said
25 dispenser head (40) and extending firstly radially away
from said dispenser head (40), and secondly axially
towards the reservoir (10) beyond said fixing ring (30),
said actuator portion (52) being pivotally mounted on
said presser element (54) and extending radially and
30 axially towards the fixing ring (30) so as to co-operate
with said ring from below, when the device is in the
upright position.

35 Translation of the title and the abstract as they were when originally filed by the
Applicant. No account has been taken of any changes that may have been made
subsequently by the PCT Authorities acting ex officio, e.g. under PCT Rules 37.2,
38.2, and/or 48.3.
